COASTAL MANAGEMENT

As an island, the towns and cities based along Britain's coastline are often at risk from the impact of violent seas and saltwater corrosion. Our coastal management expertise can help minimise and prevent tidal damage.

We specialise in protecting and strengthening existing structures, and designing and building new sea defence structures.

We cover:

Pointing and Masonry Works

Scour Protection Works

Installation of New Coastal Management Structures

HEALTH, SAFETY AND RISK MANAGEMENT

When it comes to managing coastlines, our experience comes into its own. From maintenance and repairs to design and build, we understand the inherent risks that come with working in tidal zones – and can adapt our practice and procedures accordingly.

We are fully trained and certified to work in risk-associated environments where watercourse pollution must be kept to an absolute minimum. The fact that we enjoy an on-going relationship with many of our clients is testament to our outstanding Health and Safety record.
