FLOOD ALLEVIATION & DRAINAGE

The devastating impact of flooding across the UK in recent years has highlighted the importance and necessity of well-devised flood alleviation schemes. That's where we come in.

One of our core services is designing and building bespoke flood alleviation structures to help prevent flooding or quickly drain water away from areas at risk of flooding – in both the natural and urban environment.

Our works include:

Embankment Dams

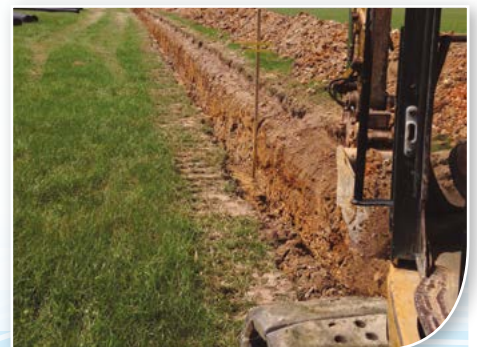

Flood Relief Channels

Flow Control Structures

As well as constructing structures from scratch, we also undertake emergency works to repair damaged structures.

HEALTH, SAFETY AND RISK MANAGEMENT

We are fully trained and certified to work in risk-associated environments where watercourse pollution must be kept to an absolute minimum. The fact that we enjoy an on-going relationship with many of our clients is testament to our experience, expertise and outstanding Health and Safety record.
